Voxion Internet Telephony or Voice-over-IP (VoIP) allows you to bypass the traditional telephone network (PSTN) and instead use the Internet to make phone calls.

How does it work?

Voxion Internet Telephony allows you to make calls using a softphone installed on your PC, an IP Phone connected to your ADSL router or a VoIP Gateway connected between your regular phone and your ADSL router.

With a VoIP Gateway you can still receive and make regular phone calls using your home phone and use Voxion Internet Telephony when you want by dialing a configurable prefix like '*'.

What does it cost?

Costs vary between locations, you can however be sure that you make significant savings wherever you call. **Even local calls are cheaper!** AIS, DTAC, True only 1.36 Baht per minute! Download full rates from our website www.voxion.net.
